Nucleic acid characteristic of late or early passage cells immortalised by papilloma virus - and related polypeptide(s) and antibodies, used for diagnosis and treatment of cervical cancer and assessing potential for progression of cervical lesions.

Claim 3; Fig 2; 8pp; German.

This sequence, C21.7, is derived from a human papillomavirus (HPV) immortalised human foreskin keratinocyte cell line HPK-1A and is characteristic of late or early passage cells. This sequence is used in a method for assessing the potential for progression of cervical lesions. Antibodies generated against the encoded polypeptide are used for diagnosis of cervical cancer and to assess potential for lesion progression. Antibodies can also be used therapeutically by inhibiting

contacting a biological sample from the patient. The method comprises contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is 80 % identical to a ctable of sequences (see ACC50951 to ACC51059). ACC50951 to ACC51059 concode the human bladder cancer-associated proteins given in ARR48146 to ABR48242). Bladder cancer-associated proteins given in ARR48146 to ABR48242). Bladder cancer-associated sequences from the present invention converted cathorities, and can be used in antisense gene therapy and in vaccine production. The method can be used for detecting a bladder cancer-associated transcript in a cell from a patient. The method is compounds that modulate bladder cancer, such as hormones or antibodies. The nucleic acid modecules from the present invention may be used in various screening and diagnostic methods, and for gene therapy, vaccine and/or antisense/inhibition applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lung cancer-associated polynucleotide, gene, ds, cytostatic, emphysema, antinflammatory, antiasthmatic, non-small cell lung cancer, atelectasis, small cell lung cancer, benign lesion; precancerous lesion, bronchitis; chronic obstructive pulmonary disease, hypersensitivity pneumonitis; interstitial pulmonary fibrosis; fibrosis; asthma; bronchiectasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       386

```
transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer, by administering a modulatory compound identified. The methods are useful cancer in a patient and for treating a mammal having lung cancer, by administering a modulatory compound identified. The methods are useful lung cancer or other benign or precancerous lesions, e.g. atelectasis, emphysema, bronchitis, dhronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, asthma and compounds that modulate lung cancer, such as antibodies. The invention relates to nucleic acids and proteins (ADN38683-ADN40064) whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention, antibodies which specifically bind a polypeptide of the invention, use of such antibodies for drug targeting, and methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids polypeptides, cancer and other conditions such as psoriasis, ischeemia, heart disease, attherosclerosis, inflammatory diseases, autoimmune diseases, retinal necowascularistation syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       62

The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a

The present invention describes isolated polynuclectide sequences (I), which encode polypeptides (II) with biological activity. Also described:

(II) a vector comprising (I); (2) an expression vector comprising (I); (3)

a host cell genetically engineered to comprise (I) which is operatively
cassociated with a regulatory sequence that modulates expression of (I) in
the host cell; (4) a polypeptide (II) encoded by (I); (5) a composition
comprising the polypeptide of (4) and a carrier; (6) an antibody directed
against the polypeptide of (4); (7) detecting (I) or the polypeptide of
(4) in a sample; (8) identifying a compound that binds to the polypeptide of
(I) in producing the polypeptide of (4); (7) detecting (I) or the polypeptide of
(I) The polynucleotides (I) can be used as hybridisation probes;
(I) The polynucleotides (I) can be used as hybridisation probes;
(I) The polynucleotides (I) can be used as hybridisation probes;
(I) The polynucleotides (I) can be used as hybridisation probes;

The molecules of the invention demonstrate antiinflammatory, neuroprotective, antianaemic, cytostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, haematopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic contig

                                    This sequence encodes a protein which is associated with Fanconi anaemia This protein can be used as an immunogen for preparation of antibodies. This sequence can be used for diagnosis of, or detecting predisposition to, diseases that involve disorders of the cell cycle, cell activation, cell cycle progression, DNA repair, cytopaenia, tumorigenesis and/or tumour progression, also for treatment and prevention of these diseases, particularly by gene therapy

The present invention relates to methods of detecting a prostate cancerassociated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancerassociated polymuclectides (designated PC genes) that selectively hyridise to a sequence that is at least 80% identical to them. The prostate cancerassociated polymuclectide sequences are differentially prostate cancerassociated polymuclectide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are useful for (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer associated genes are useful for diagnosing or treating prostate cancer.

as well as for identifying modulators of prostate cancer or agents that this prostate cancer. Or inhibit prostate cancer or agents that the third the prostate cancer or agents that the best of the cancer or agents that the third in gene therapy, as a vaccine or in antisense applications.

ABK92115-ABK92263 represent prostate cancer-associated polymucleotide

```

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer-associated polymucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell fung acancer tor other benign or precancerous lesions, e.g. atclectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, asthma and bronchiectasis. The genes, polymucleotides and polypeptides are useful compounds that modulate lung cancer, such as antibodies. Sequences the invention of the invention of the compounds that modulate lung cancer, such as antibodies. Sequences the invention of the invention of the cancer of the cancer such as antibodies.

ö

Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample. P-PSDB; ADN39436

Claim 8; SEQ ID NO A35; 1385pp; English.

whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; use of such antibodies for drug targeting; and methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, and the invention is the polypeptides and methods are useful for diagnosing, prognosing and treating The invention relates to nucleic acids and proteins (ADN38683-ADN40064)

cc sequence identity to (a) -(c); or (e) a sequence that hybridises to (a)-

(c). Also described: (1) an expression vector comprising the above

cc muclaic acid; (2) a host cell comprising the above expression vector; (3)

a process for producing a polypeptide; (4) an isolated polypeptide

cc morrising: (a) an amino acid sequence encoded by the full-

cc nuclectide sequences; (b) an amino acid sequence encoded by the full-

cc nuclectide sequences; (b) an amino acid sequence encoded by the full-

cc nuclectide sequences; (c) an entire polypeptide

cc nuclectide sequences; (b) an inno acid sequence encoded by the full-

cc nuclectide sequences; (c) a sequence

cc na isolated antibody that binds to the above polypeptide; (6)

cc no producing the antibody; (8) an isolated oligopeptide that binds to

the above polypeptide; (9) a tumour-associated antigenic target (TAT)

cc the above polypeptide; (9) a tumour-associated antigenic target (TAT)

cc the above polypeptide; (9) a tumour-associated antigenic target (TAT)

cc the above polypeptide or TAT binding organic molecule, in combination

cc antibody, oligopeptide or TAT binding organic molecule, in combination

cc mithody, oligopeptide or TAT binding organic molecule, in combination

cc mithody, oligopeptide or TAT binding organic molecule, in combination

cc mithody, oligopeptide or TAT binding organic molecule, in combination

cc mithody, oligopeptide or protein; (13) a method of a tumour in a potentiating effect of the above protein; (13) a method of determining the protein

cc therepoutically treating a mammal having a cancerous tumour comprising

cc therepoutically treating a mammal having a cancerous tumour comprising

cc therepoutically treating a mammal having a cancerous tumour comprising

cc therefore a protein in a sample suppected of containing the protein

cc mammal; (16) a method of or treating or preventing a cell proliferative

cc protein; and (17) a method of binding an antibody, oligopeptide or cc organic molecule to a cell that expresses the prot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          566
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 626
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      182

Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological

Claim 1; SEQ ID NO 1723; 2922pp; English.

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to CDNAs encoding them (ABQ54131-ABQ56305), and also concompasses polypeptides 90% identical and polypuclectides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen and the use of ovarian antigens polymuclectides and polympeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast related disorders. Succonditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system of sorders of ovarian or breast origin, reproductive system disorders (e.g., infertinity, disorders of pregnancy, anovulation.

CC disorders, infertinity, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infertines (e.g., chlamydia, HIV, toxoplasmosis, and toxic disorders, infertines (e.g., chlamydia, HIV, toxoplasmosis, ond toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vaginatory disorders (e.g., congenital and acquired immunodisorders (e.g., cancillantia, polypeptides and toxic muchanne opporatine, systemic lasorders.)

Cc shock syndromes, neurological disorders, gastrointestinal disorders condulate ovarian antigen expression or activity. The polymucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polymucleotides may also be used in screening for compounds which contentions and the polypeptides may be used as food additives or to prepare antibodies contential in disease disagnosis, drug targeting and phenotyping. The present contention when the represented or the printed specification, in the management of the printed specification, in the management of the printed specification, in the management of the printed specifica WIPO at ftp.wipo.int/pub/published\_pct\_sequences

; The invention relates to a novel method for detecting soft tissue saxcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of a gene in both samples and comparing the expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated by of the invention. The current sequence is not shown within the 182 242 TTTCGAGTGCCAGAACCCAAGGAGGTGCAAATGGACAGAGCCATACTGCGTTATAGCGGC 122 204 264 GATGGAGACCCAAGCCAGAGGAGAAGCGGTTTCTCCTGGAAGAGCCCATGCCCTTCTT 324 soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human; Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue 145 TITCGAGTGCCAGAACCCAAGAGGGGGAAATGGACAGAGCCGTACTGCGTTATATAGCGGC CGTGAAAATATTTCCACGTTTTTTCATGGTTCGCAACAGGTGCTCCGCTGGTTGTGCAGC GATGGAGAGACCCAAGCCAGAGAGAGAGGGTTTCTCCTGGAAGAGCCCCATGCTT 1; Gaps DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor. 89.5%; Score 233.6; DB 12; Length 1745; 96.2%; Pred. ```

The invention relates to a novel isolated polynucleotide and the encoded polypeptide. The molecules of the invention demonstrate antinflammatory, neuroprotective, antianaemic, cytostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, hacmatopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic DNA of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the WIPO web-site.

| Sequence 1, Application US/09127928
| Sequence 1, Application US/09127928
| Patent No. 6472172
| GENERAL INFORMATION:
| APPLICANT: Deng, Gang
| APPLICANT: Morser, Michael J
| TITLE OF INVENTION: DNA Encoding a No. 6472172el Human Inhibitor-of-Apoptosis
| TITLE OF INVENTION: DNA Encoding HIAP3
| CURRENT APPLICATION NUMBER: US/09/127,928
| CURRENT APPLICATION NUMBER: US/09/127,928
| CURRENT PILING DATE: 1998-07-31
| NUMBER OF SEQ ID NOS: 7
| SEQ TO NO 1
| SEQ TO NO 1
| LINGTH: 1337
APPLICANT: VENTILE.

APPLICANT: VENTILE.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CLOO1307

CURRENT APPLICATION NUMBER: US/09/949,016

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FABLEEQ for Windows Version 4.0

SEQ ID NOS: 207012
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  151 regresassecesererrecerceareceaecraasseceaereceaereceaecreceaecere 210

; Sequence 13188, Application US/09949016
; Patent No. 681239
; GENERAL INFORMATION:
; APPLICANT: VENTER, J. Craig et al.
; TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
; TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
; TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        218241 GTATCTTGATTCATACAĞATATACTATTTTTCAĞAĞCAAĞAAAGAGAĞGĞACAATAAA 218182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GENERAL INFORMATION:
APPLICANT: Schatz, David G.
TITLE OF INVENTION: An Autoregulatory Tetracycline-Regulated
TITLE OF INVENTION: An Autoregulatory Tetracycline-Regulated
TITLE OF INVENTION: System for Inducible Gene Expression in Eucaryotes
NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
ADDRESSES: STERNE, KESSLER, GOLDSTEIN & FOX P.L.L.C
STERET: 1100 New York Ave. Suite 600
